PRECISELY ENGINEERED HIGH STRENGTH CONCRETE

## "SureLock" HANDHOLES

Keep the Con out of Your Concast Box

# Overview

Concast's new SureLock line of FHRSLP handholes are an excellent solution for the nationwide issue of copper wire theft. Copper theft occurrences in the US have increased 500% since 2001. These crimes can create serious problems: the resulting loss of street lights, traffic lights and communications cause traffic snarls, accidents, assaults, and injuries. The extra security on these boxes will help to keep the "con" out, and your infrastructure intact.

## Product Description

FHRSLP open-bottom boxes utilize a double-lock system. The entire steel cover is padlocked to the box frame. That padlock is protected by an exterior access cover which is secured by Concast's new SureLock Bolts.

## SureLock Bolts

These bolts are custom-keyed and can only be unfastened with a special release tool provided by Concast. They are available in a 3/8-16 UNC thread and in several lengths; making them a great option for securing other products that need that extra layer of protection. So, items like pull boxes, standard handholes, and box pads can be retrofit with these high security fasteners as well.

Concast is continually working to find new precast solutions that will supply our customers with the best line of concrete products in a timely manner, while still upholding our high quality standards. They stand behind their products with an unmatched 35 year warranty.

## Standard Features

- Galvanized Steel H20 Rated Cover.
- Exterior Access Cover Secured by SureLock Bolt.
- SureLock Bolt can only be loosened with Concast tool.  
P/N: 8000SL.
- Padlock tab in frame secures cover to the box.
- Locking tabs on the cover and frame interlock for added security.
- FHRSLP handholes available in a variety of sizes.
- Con-Duct plastic terminators cast into all sidewalls.
